DETAILED ACTION

1. The preliminary amendment filed April 04, 2002 has been received and entered.

Information Disclosure Statement

2. Applicant's prior art citation filed April 04, 2002 has been received, considered and placed of record.

Specification

3. The abstract of the disclosure is objected to because it is improper. The "Figure 2" should be deleted. Correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Kluegl (U.S. Patent No. 6,561,435).

Kluegl teaches a fuel injector comprising a nozzle body (see Fig. 1) and at least one retaining flange (5) situated on the nozzle body and projecting radially. The flange has a working surface for a hold-down device and a seating surface for positioning on a cylinder head of the engine (col. 3, lines 09-22). The retaining flange includes two retaining flanges situated opposite one another (see Fig. 1) and are made as separate components and are joined to the nozzle body in one of an integral (i.e. welding, molding and etc.) and a friction-locking manner (see Fig.1). Further, the retaining flanges cover an angular range of about 45 degrees in a peripheral direction.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hoffer, Sugiura et al. and Grytz are cited of general interest.
